

WiloStar3D Academy Teaching Textbooks Overview

STEP 1- Read the math overview here in the info vault to understand how math works at WiloStar3D Academy. It's essential you understand this before proceeding with the placement testing.

STEP 2- WiloStar will make recommendations regarding the level to take for the Teaching Textbooks placement test. You will follow the instructions in the orientation math section and then submit your results using the online WiloStar form. This way we can make sure you are placing into the right level and have a record of your results.

STEP 3- Once your math level has been confirmed your parents will then sign you up for the [online Teaching Textbooks subscription](#) to the correct level. We now require all students using Teaching Textbooks to use the online version because that is the most comprehensive and up to date version. It is also more affordable. Please note that the pacing

guide on the dashboard is the recommended pace to complete your lessons. Some students take longer and some work faster.

Math is the one area where WiloStar parents are responsible for helping ensure your child is progressing as they work through math. You can do this by checking in on the pacing guide and making sure that your child is uploading the quiz scores as they finish them.

***Please also note that we also offer math tutoring and one on one help as your child needs it as an add on fee to the regular program. But the day-to-day supervision of the Teaching Textbooks program is the responsibility of each parent.

STEP 4- We add your math pacing guide to your WiloStar dashboard. Each day you will see what is assigned. Please note that in some instances (high school level courses) you will have TWO lessons each day.

Uploading Quiz & Test Scores

1. Our math teacher will touch base with you regarding the correct level to subscribe to in Teaching Textbooks. Teaching Textbooks now has an online version which we require.
2. We will add your math pacing guide to your WiloStar dashboard to help keep you moving along each day with math. Your pacing guide is a useful timeline for completion and its suggested you try to stick to it this year. Please note that high school students who are taking math over just one semester will typically have TWO assignments per day on their pacing guide. Also note that Wednesdays there are no assignments on the pacing guide, but you may want to use that day to catch up on math if you fall behind.
